

# **Preventive Care Guidelines for Men**

Recommendations apply to most men of normal risk. Additional tests and immunizations may be recommended based on specific risk factors. Preventive care for transgender individuals may require special considerations. Please talk to your doctor about the preventive care you may need. Visits with your primary care provider (PCP) are recommended every 1–3 years and should include the following based on age.

Ages 19-39 Ages 40-49 Ages 50-64 Ages 65+

### Health History and Lifestyle Assessment

Complete or update assessment, including family history; physical activity; tobacco, alcohol, and drug use; and sexual practices

## **Physical Exam**

Height and weight (Body Mass Index [BMI])

Blood pressure

Height and weight (Body Mass Index [BMI])

Blood pressure

Vision screening

Height and weight (Body Mass Index [BMI])

Vision screening

Height and weight (Body Mass Index [BMI])

Blood pressure

Hearing and vision screening (glaucoma screening if family history)

#### **Tests**

Screen for lipid disorders based on 10-year cardiovascular risk

One time screening for Hepatitis C for ages 18–79. Periodic screening for those at increased risk

Screening for colorectal cancer beginning at age 45 using fecal occult blood testing, multitargeted stool DNA test (e.g., Cologuard®), sigmoidoscopy, or colonoscopy

Screen for lipid disorders based on 10-year cardiovascular risk

Screen for prediabetes and diabetes if overweight or obese

One time screening for Hepatitis C for ages 18–79. Periodic screening for those at increased risk

Screening for colorectal cancer using fecal occult blood testing, multi-targeted stool DNA test (e.g., Cologuard\*), sigmoidoscopy, or colonoscopy

Screen for lipid disorders based on 10-year cardiovascular risk

Screen for prediabetes and diabetes if overweight or obese

Talk with your doctor about risk and need for prostate cancer screening by prostate-specific antigen and digital rectal exam

One time screening for Hepatitis C for ages 18–79. Periodic screening for those at increased risk

Screening for colorectal cancer using fecal occult blood testing, multi-targeted stool DNA test (e.g., Cologuard\*), sigmoidoscopy, or colonoscopy, until age 85

Screen for lipid disorders based on 10-year cardiovascular risk

Screen for prediabetes and diabetes until age 70 if overweight or obese

Talk with your doctor about risk and need for prostate cancer screening by prostate-specific antigen and digital rectal exam, until age 69

One time screening for Hepatitis C for ages 18–79. Periodic screening for those at increased risk

# **High Risk Individuals**

Low-dose aspirin therapy recommended for ages 50–59 when 10-year cardiovascular disease risk is high (≥10%)

Screen for syphilis infection in individuals at risk

Screen for latent tuberculosis infection in asymptomatic adults at increased risk

Lung cancer screening for ages 50-80, if 20-year history of smoking one pack per day, and currently smoking, or quit within the past 15 years

Hepatitis B screening for high risk individuals

HIV pre-exposure prophylaxis in high risk individuals

Adults with a BMI of 30 or higher should consider intensive weight loss interventions

One time screening for abdominal aortic aneurysm for men ages 65–75 who are smokers or who once smoked

Additional COVID-19 doses for individuals at risk, based on CDC recommendations

Guidelines adapted from the U.S. Preventive Services Task Force. Talk to your doctor about which preventive services are right for you. Your Plan benefits may allow for services more frequently than what is listed here.

Current information on the COVID-19 vaccine can be found at CDC.gov/COVID. Appropriate immunization is recommended.
